

AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

ABSTRACT

~~The invention relates to a~~ A method, a system, a server, and a computer program product ~~are provided~~ for Multimedia Capability discovery of different user terminals ~~12,13~~. ~~This solution~~ ~~avoid unnecessary~~ Unnecessary use of the radio interface ~~and is avoided~~ based on a network storage ~~18~~, which is accessible without registration to find out about the calling as well as the called user's multimedia capabilities during a voice call. If there is a positive capability discovery result out of this for both users, the system ~~will send~~ sends a message to each of the ~~two~~ user terminals ~~12,13~~ that they should notify the users, e.g., by displaying an icon above a soft button. There ~~will be~~ is no need for establishing a packet switched session, which uses a lot of radio interface signalling, until the Multimedia Service capability of both subscribers and their user terminals ~~are~~ is investigated and responded to both user terminals and their users.
